Profile Summary

I am an Information Technology undergraduate student with hands-on experience in full-stack web development using Java, Spring Boot, MERN stack and Python. Strong foundation in OOP, Data Structures, and REST API development. Skilled in building scalable, user-friendly web applications and eager to gain real-world experience through a software engineering internship. Proficient in debugging, optimising performance, and delivering high-quality code.

Education

- **BSc (Hons) in Information Technology - (Current GPA: 3.65)** Jan 2023 - Present
Sri Lanka Institute of Information Technology (SLIIT) – Malabe
- **Advanced Level Examination – 2022**
Physical Science Stream in Siridhamma College, Galle
- **Ordinary Level Examination – 2019**
Siridhamma College, Galle

Technical Skills

Programming Languages

- Java
- Python
- JavaScript
- C++

Front-End Technologies

- React.js
- Html
- CSS

Back-End Technologies

- Node.js
- Express.js
- Spring Boot
- Java Servlets

Databases

- MongoDB
- MySQL
- SQLite
- PostgreSQL

Tools & Platforms

- Git
- GitHub
- Postman
- VS Code

Concepts & Others

- Object-Oriented Programming Concepts(OOP)
- REST APIs
- Authentication & Authorization (Auth0, OAuth 2.0, JWT, MFA)
- Agile Basics
- Performance & Debugging

Certificates

- React.js for Beginners – SimpliLearn Platform.
- Front-End Web Development – Open & Distance Learning Platform University of Moratuwa.
- Web Design for Beginners – Open & Distance Learning Platform University of Moratuwa
- Python for Beginners – Open & Distance Learning Platform University of Moratuwa.
- Python Programming – Open & Distance Learning Platform University of Moratuwa.

My Projects Experience

Fuel Station Management System (MERN Stack)

- Built a full-stack web application for fuel sales, inventory, and EV charging management using React.js, Node.js, Express.js, and MongoDB.
 - Developed RESTful APIs and CRUD operations, reducing manual stock tracking errors by 90%.
 - Improved operational efficiency for 5+ staff users through workflow automation.
-

Live Weather Analytics Dashboard (React, Node.js, Auth0)

- Developed a secure web application with Auth0 authentication (OAuth 2.0, MFA).
 - Integrated OpenWeatherMap API to fetch real-time weather data and compute a custom Comfort Index score.
 - Implemented caching and city ranking to improve performance and reduce API calls.
-

Daily NoteBook (Python)

- Developed a secure backend-driven web application using Python, Django, and PostgreSQL following the MVC/MVT architecture.
 - Implemented JWT-based authentication and role-based access control for secure user data access.
 - Designed and managed relational database models using Django ORM, ensuring data integrity and optimized queries.
-

Online Salon Appointment Booking System (Spring Boot)

- Built a real-time salon appointment system supporting 50+ daily customers, decreasing scheduling conflicts by 80% and automating customer management tasks.
 - Created service management modules to enhance staff efficiency and appointment organization.
 - Technologies: Java, React.js, HTML, CSS, MySQL
-

Online Hospital Management System (MERN Stack)

- Developed patient, doctor, and appointment management modules using the MERN stack.
 - Designed REST APIs to reduce appointment conflicts and improve system reliability.
 - Enhanced UI components to improve usability for staff and patients.
-

Online Hotel Reservations System (Java Servlet)

- Designed hotel listing, room search, booking, and payment modules supporting 200+ daily users, automating email confirmations to eliminate manual follow-ups.
 - Integrated filtering and sorting features for room types, prices, and amenities, improving booking efficiency and customer satisfaction.
-
